

Study plan

Introduction of my background

I completed my undergraduate studies in Bachelor's degree in electrical engineering and energy at higher school of technology. During my academic journey, I built a strong foundation in electrical engineering through coursework, projects, internships and research. These experiences have motivated me to pursue further studies abroad, with the aim of enhancing my academic knowledge, expanding my international perspective, and preparing myself for a professional career.

Why do I choose to study in China

China has become a global leader in higher education, scientific research, and technological development. It provides an international environment where students can benefit from high-quality teaching, advanced research opportunities, and exposure to diverse cultures. Furthermore, China's rapid development in many fields makes it an ideal place to acquire both academic knowledge and practical skills. Studying in China will also allow me to learn the Chinese language and culture, which will be an important asset for my future career.

Why do I choose to study in (your university)

(Your university) is recognized for its strong academic reputation and commitment to excellence in teaching and research. Its master's programs attract talented students from all over the world, creating a stimulating environment for academic growth. I am particularly interested in the [name of faculty/department], where I can benefit from the expertise of distinguished professors and participate in research projects that align with my academic goals. I believe this university offers the best environment for me to further develop my knowledge and skills.

Detailed study plan

In the first semester, I plan to focus on intensive Chinese language learning. My goal is to develop strong communication skills in listening, speaking, reading, and writing. This will help me adapt to daily life in China, integrate into the academic environment, and collaborate more effectively with professors and classmates. I will devote myself to classroom study, language practice with peers and local students, and independent learning.

After completing the language program, I will continue directly into a Master's degree in electrical engineering or embedded system. My graduate studies will allow me to deepen my academic knowledge and strengthen my research abilities. I plan to engage actively in coursework, seminars, and academic discussions while also contributing to group projects and research activities. By the end of my Master's program, I aim to produce high-quality academic work that reflects my commitment, discipline, and research skills.

Future plan

After completing my Master's degree in Electrical Engineering with a specialization in Embedded Systems, I plan to pursue a professional career in industries where embedded technologies play a key role, such as telecommunications, robotics, and intelligent systems. I aim to apply the knowledge and skills I acquire to contribute to innovative projects in areas like smart devices, automation, and the Internet of Things (IoT).
